

normalized chip distribution $f(X)$ and cumulative distribution $F(X)$
computer simulations for $q=0$
dashed line = analytical solution

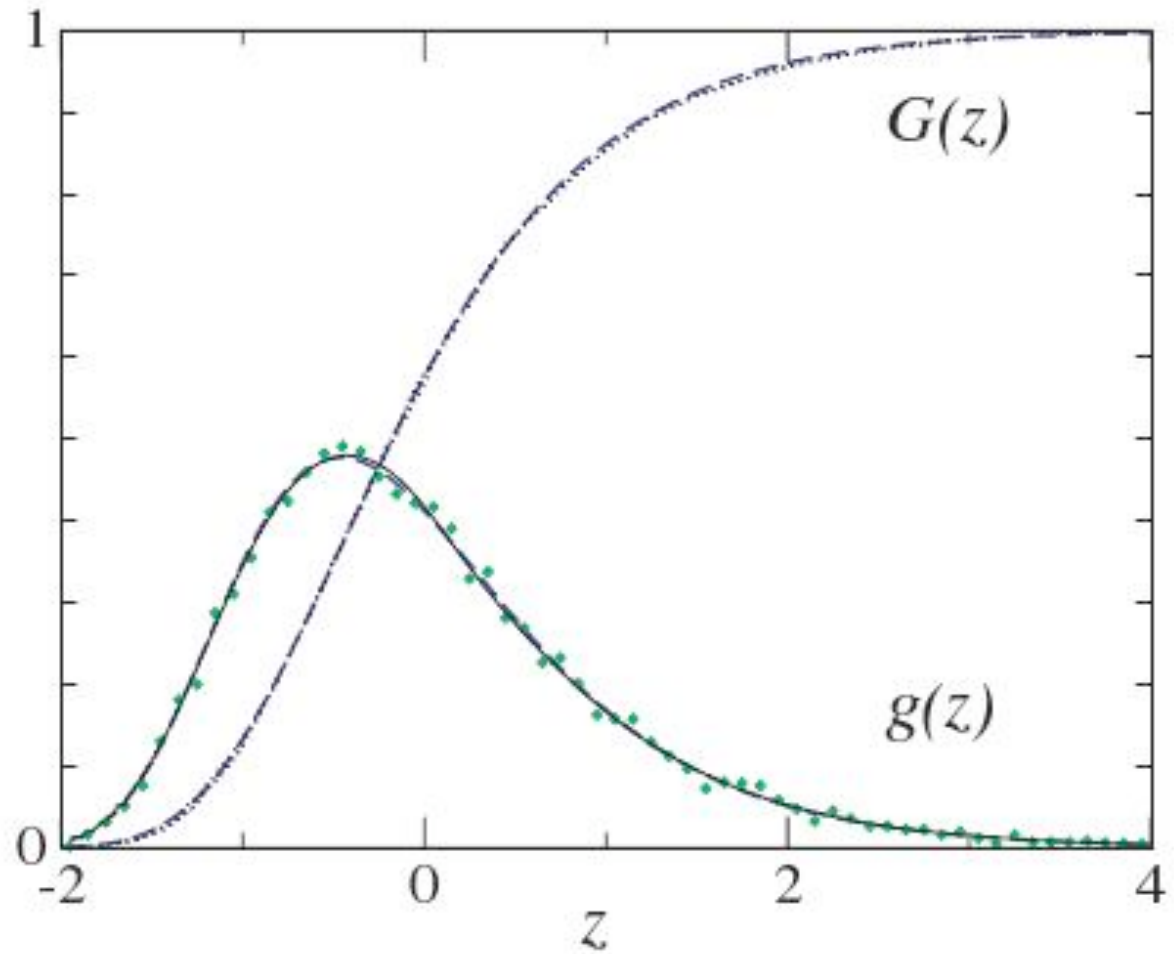

normalized chip distribution $f(X)$ and cumulative distribution $F(X)$
computer simulations for $q=0$
dashed line = analytical solution
dots = data from real tournaments

cumulative distribution $F(X)$: data from real tournaments
dashed line = analytical solution for $q=0$

average number of chip leaders

chips of the chip leader: $z \propto x_{lead} - \langle x_{lead} \rangle$
